

Are you lightheaded? Take this quiz

Headlight modules are an important part of a vehicle's styling. Designers favor modules that combine a clear lens with chiseled, metal-coated reflectors to make the headlight shimmer like a diamond. A few premium vehicles offer adaptive lighting systems that use motors and projector lenses to pivot one or both headlamps mechanically. The headlamps pivot in the direction the steering wheel is turned. So here's your challenge: If you call yourself a real car person, you should be able to identify each of the vehicles on this page simply by the design of the headlight module. Pictured are a Buick Enclave, Land Rover LR2, Hyundai Veracruz, Lexus LS 600h L, Lincoln MKX, Mazda CX-7 and Suzuki XL-7. Match the name with the correct photo. The answers are below.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____
